Checkpoint at revision C
Raw projection, clocks and tombstones
Retained operation tail
C+1 through committed HEAD
Retained acceptance receipts
Batch IDs and original revision ranges
Valid checksum and graph schema?
Exact contiguous tail and op counts?
Old retry returns original acceptance
No new revision allocation
No
Yes
Reject recovery
Preserve existing projection
One Neo4j transaction
Clear projection, restore base, replay tail, set head
Recovered model
Rollback replacement if the transaction fails
